

IN THE CLAIMS

Please amend Claims 1, 3 and 4 as follows:

1. (Currently Amended) A remote monitoring apparatus comprising:

a control/monitoring unit for remote monitoring;

AH
a mobile communication terminal including a camera unit for photographing a subject, for performing a call service and an image processing/transmission service including an operation of photographing a subject with the camera unit; and

a dynamic support located in a remote place to be monitored and having the mobile communication terminal detachably mounted on the dynamic support, for controlling a posture of the mounted mobile communication terminal and positional movement of the dynamic support upon receiving a ~~posture/position~~ posture and position control command on the mounted mobile communication terminal from the control/monitoring unit via a wireless Internet and the mounted mobile communication terminal.

2. (Original) The apparatus as claimed in claim 1, further comprising a connector for performing communication between the mounted mobile communication terminal and the dynamic support.

3. (Currently Amended) A remote monitoring apparatus comprising:

a control/monitoring unit for remote monitoring;

a mobile communication terminal including a camera unit for photographing a subject, for performing a call service and an image processing/transmission service including an operation of photographing a first subject with the camera unit;

an independent camera for photographing a second subject; and

a first dynamic support located in a remote place to be monitored and having the mobile communication terminal mounted on the first dynamic support, for controlling a posture of the mounted mobile communication terminal and positional movement of the first dynamic support upon receiving a ~~posture/position~~ first posture and position control command on the mounted mobile communication terminal from the control/monitoring unit via a wireless Internet and the mounted mobile communication terminal and, upon receiving a ~~posture/position~~ second posture and position control command ~~on the independent camera~~ from the control/monitoring unit via a

wireless Internet and the mounted mobile communication terminal, wirelessly transmitting the ~~posture/position~~ posture and position control command ~~on the independent camera~~ to the independent camera ~~in accordance with a local wireless communication method~~.

AI 4. (Currently Amended) The apparatus as claimed in claim 3, further comprising a second dynamic support on which the independent camera is mounted, for wirelessly receiving the ~~posture/position~~ posture and position control command from the first dynamic support ~~in accordance with a local wireless communication method~~ and controlling a posture of the mounted independent camera and positional movement of the second dynamic support.

5. (Original) The apparatus as claimed in claim 4, further comprising a connector for performing communication between the mounted independent camera and the second dynamic support.
